Amritpal Singh Kaur

Software Support Specialist | Customer Success (Airline Account) | MSc Advanced Computer Science (Merit)

sharysingh1144@gmail.com | 07722 145 765 | London, UK | apsk-dev.vercel.app | linkedin.com/in/amritpal-singh-kaur-b54b9a1b1 | github.com/Amrit004

PROFESSIONAL SUMMARY

Software Support Specialist and Customer Success Manager for an airline account at Brock Solutions, based at Heathrow Airport. I support SmartSuite, a real-time baggage operations platform used by major airlines, and run monthly service reviews with airline stakeholders, tracking incidents and open actions through to resolution. I have also delivered on-site product training in Mexico and Spain, working in Spanish with airline and airport staff during rollouts. MSc Advanced Computer Science graduate (Queen Mary University of London, 2026, Merit), comfortable with Python, JavaScript/TypeScript, AWS, Docker, and CI/CD.

EDUCATION

MSc Advanced Computer Science - Queen Mary University of London | 2025 - 2026

Merit (Completed) | Cloud Architecture, Machine Learning, Security & Authentication, Distributed Systems, Data Analytics, Research Project

- **MSc Research Project - Lightweight Software Verification Tool:** designed and implemented a CTL model checker in Python achieving 34/34 test cases passing, covering Kripke structure parsing, temporal logic evaluation, and automated counterexample generation.

BSc (Hons) Computer Science, 2:1 - Staffordshire University | 2022 - 2025

Full-Stack Development, Cloud Computing, AI, Cybersecurity, Mobile Development, Databases, Networking, UX Design

PROFESSIONAL EXPERIENCE

Onsite Software Support Specialist - Brock Solutions | Apr 2026 - Present

Heathrow Airport, London

- Keep SmartSuite, a real-time baggage operations platform used by major airlines, running across a multi-terminal network of workstations, scanners, and peripherals.
- Diagnose and fix software bugs, application faults, and performance problems in the baggage handling systems (BHS) that keep Heathrow running 24/7.
- Work through incidents by reading system and application logs, querying SQL baggage database (BODB) records, and applying targeted fixes to restore service with minimal passenger disruption.
- Act as first point of contact for technical incidents, triaging by business impact to keep critical systems inside tight SLAs and low mean-time-to-resolution.
- Get to the root cause of recurring faults, ship permanent fixes, and write runbooks, knowledge articles, and diagnostic scripts that cut repeat incidents and speed up resolution.
- Look after enterprise infrastructure - Windows Server, SQL databases, Azure, and industrial automation interfaces - in line with IATA Resolution 753 compliance.

Customer Success & International Delivery

Monthly service reviews | Incident follow-up | Customer relationship management | On-site training in Spanish

Customer Success Manager - Airline Account

- Run the airline account as Customer Success Manager, holding monthly service reviews to confirm performance and work through the previous month's incidents and open problems.
- Track agreed actions through to resolution, manage escalations, and act as the main point of contact between the airline and the technical/support team.
- Keep the airline informed and confident in the service, making sure their concerns are understood internally and acted on.

International Product Training - Mexico & Spain

- Travelled on-site to Mexico and Spain to train airline and airport staff on the system, delivering training in Spanish.
- Answered user questions and concerns directly, adapting explanations to different levels of technical knowledge.
- Acted as the on-site point of contact for customer concerns during the rollout, resolving issues quickly and keeping local teams informed.

IT Support Engineer (Deployment / Break-Fix) - Manpower (Zoom IT) | Apr 2022 - Apr 2026

Enterprise field placements at Bank of America, Amadeus, and ENI, London, UK

- Supported 100+ end users and resolved complex hardware/software incidents across enterprise desktop systems at Bank of America, Amadeus, and ENI, minimising downtime in regulated FinTech, travel technology, and energy environments.
- Ran large-scale deployments at Bank of America (500+ devices, asset management) and handled secure laptop and mobile replacements with enterprise application installs for Amadeus.
- Provided Level 2 escalation support at Amadeus and assisted in a full Windows 11 migration across ENI's energy infrastructure, reducing mean time to resolution and maintaining 99.9% uptime.
- Applied security patches, system hardening, and OS updates to meet FinTech, GDPR, and financial industry requirements, and kept technical documentation and the team knowledge base current.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript (ES6+), TypeScript, C# (.NET), HTML5, CSS3
Frameworks & Libraries: React, Next.js, Node.js, Express.js, Scikit-learn, NumPy, Pandas, Matplotlib
Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CloudWatch), Azure (Azure AD, Intune), Docker, Kubernetes, CI/CD, Git, Vercel, Linux/Unix, Windows Server, Active Directory
Support & Operations: Incident Management, Root Cause Analysis, Log Analysis, SQL Diagnostics, SLA Management, SmartSuite / BHS, Multi-terminal Networks, IATA Resolution 753
Security: AES-256 Encryption, JWT Auth, OAuth, IAM, CVE Analysis, Network Security, Secure Design Patterns, FinTech/GDPR Compliance
Databases: SQL, MySQL, PostgreSQL, SQLite, SQL Server, MongoDB, Query Optimisation, ER Modelling
AI & Data: Machine Learning, NLP, Statistical Analysis, Predictive Modelling, Data Visualisation, Model Evaluation
Methodologies & Tools: Agile/Scrum, RESTful API Design, OOP, Functional Programming, Formal Verification, JIRA, Figma, Postman

KEY PROJECTS

- **CTL Model Checker (Lightweight Verifier):** Pure-Python CTL model checker with Kripke structure support, 34/34 tests passing, counterexample generation, and lasso detection. Completed as MSc research project.
  Tech: *Python, CTL, Formal Verification, Algorithms | github.com/Amrit004/Lightweight-Software-Verification-Tool*
- **SOC Command Center:** Enterprise security operations dashboard with real-time threat detection, an interactive world attack map, incident response workflows, and GDPR/SOC2/ISO27001 compliance tracking. AI-powered severity scoring over a live WebSocket attack feed.
  Tech: *Next.js, WebSocket, AI Analysis, Compliance | github.com/Amrit004/soc-command-center*
- **CipherOS, Cryptography Toolkit:** Client-side browser toolkit implementing AES-256-GCM encryption, SHA-3/MD5 hashing, JWT decoding, and password strength analysis via the Web Crypto API, with a zero-knowledge architecture.
  Tech: *JavaScript, Web Crypto API, AES-256-GCM | github.com/Amrit004/CipherOS*
